AutoCAD Cracked Version 2012 (and later) has an ObjectARX API. AutoCAD's ObjectARX specification, and some AutoCAD 2014 code, such as the embedded DataObjects and HiddenObjects, are partially based on the .NET API. AutoCAD 2008 and 2009 lacked both the ObjectARX and .NET support, and also had to use Visual LISP for custom functionality. Here is my code: var webNav = Cef["@mozilla.org/browser/nav-bookmarks-service;1"].getService(Ci.nsINavBookmarksService); webNav.setValue("Do Not Track", true); However, it doesn't work, no matter what I do. It simply doesn't go in as "Enabled". I have tried setting it to "Enabled" and "Disabled", and the code runs regardless. Is there a workaround for this? I know that we can call safari.showSettings("general"); to set the preferences, but is there a way to just set the setting to "Enabled" or "Disabled" in the code? A: Is there a way to just set the setting to "Enabled" or "Disabled" in the code? I believe this is the intent of the "setValue" function. From the documentation: Deprecated. Do not use this method. The result set by this method is unpredictable. Use the methods in this section instead. Since this method is deprecated, I would suggest to avoid using it. Instead, if you want to change the "Do Not Track" value, use the "getValue" function, this way you can be sure of the result. Emiliano Grillo Emiliano Grillo (a1d647c40b
