This paper will serve as an introductory reference on the operation of a full scale hyperbolic mirror converter (HMC) for solar energy conversion. The converter is a high temperature arc discharge plasma mirror device, which has been used to generate the high temperature, high pressure arc plasma, as well as to heat and cool the mirror. The design of a hydrogen recycle HMC has been described in

detail. With the HMC, a solar flux of  $2 - 5 \times 10^{15} \text{ /cm}^2 \text{ /s}$  can be converted into electricity at a cost effective rate of about \$50/Mwh.Q:

Step 1: See the Workshop The Axure Workshop is where you view all the files that make up your project. By default, you'll see a file window with the file you want to open on it. But if you have more files open, you can also see those files in a separate tab. There are two

---

ways to navigate from one file to another. You can click on one of the tabs on your file window or you can click on the navigation icon in the top-right of the Axure workspace. You can also open a new file with this icon. Click on the icon to either open a file or create a new file. You can create a new file by selecting New Project File from the drop-down menu at the top of the Axure workspace. Step 2: Create a New Project Select New Project from the drop-down menu. Then enter a name for your project. Your project can be saved to one of the local file system

or an external storage device. You can also choose to connect to a shared library of Axure projects in your computer. Your workspace will display the directory and file details for the shared library. You can also choose to create a new library and connect to it.

### Step 3: Add and Edit Files

Now that your project is created, you can begin working with your design. All of the source code that creates the interface elements in your project is stored in files. These files are the same in all projects. To open a file, right-click on a blank area of the workspace and select

---

Open. Files are added to the project through the click of a button. You can also add files through Drag and Drop in the Add button at the bottom of the Axure workspace. To edit any file, right-click on it and select Open. Step 4: Edit Files Your project may have been created with a different version of Axure than you are currently using. To open a file in the newer version of the software, select the file and press the F9 key on your keyboard. You can also select a subset of files from your project by selecting them in the Subset tab in the bottom-right corner
